

POISONS KILL MORE THAN RODENTS

- Research has shown that rat poison works its way up the food chain.
- Rats and other rodents that ingest poisons become lethargic and are easy prey for larger predators.
- Non-targeted animals become sick or die.

What Do I Do?

- Rodent-Proof your home or business
- Use alternatives to poison such as "Catch & Release"
- Help natural predators survive so they can help control rodent populations
- Contact an environmentally sensitive pest control company
